5 Energy Transformation

Capacity of doing work by a body is known as energy. Energy is never lost while it is transformed. In other words it changes its form.

Fill in the blanks with the help of clue corner :

1 Dynamo

MSWLOGO - ARITHMETIC

Let us Know

- ◆ Mathematical calculations using different MSWLOGO commands.

➤ Introduction

MSWLOGO consists of certain primitives that help you to do mathematical calculations.

MSWLOGO uses the following operators to do mathematical calculations.

Operation	Operator
Addition	+
Subtraction	-
Multiplication	*
Division	/

➤ Calculations Using PR Command

1. This function is used to add two or more numbers and produce the output. For example, **PR 60 + 30**
2. This function is used to subtract two numbers and produce the output. For example, **PR 300 - 120**
3. This function is used to multiply two numbers and produce the output. For example, **PR 6 * 17**
4. This function is used to division of one number by another and produce the output. For example, **PR 80/27**

Adding two numbers

Subtracting two numbers

Product of two numbers

Division of one number by another
