Q. Answer the following :

Q.1 Explain the relation between the hardware and software of the computer system with the help of an example.

Ans: Both the hardware and software of the computer are required for the working of a computer. Both of them are complementary to each other. Example:- The monitor of the computer is used to read whatever we type from the keyboard and the mouse of the computer is used to navigate the page.

Q.2 Can a computer run without the hardware? Explain.

Ans: Computer hardware are the parts that can be seen or touched. Without hardware a computer cannot run. All computer set ups require a disk drive (like, hard drive etc.), monitor, keyboard, motherboard, processor, power supply and video card in order to function properly.

Q.3 Can a computer run without the software? Explain.

Ans: It is possible to run a computer without a software being installed on it. But in some cases, if an operating system or an interpreter is not found on the computer then it would generate an error or show a blank screen on the monitor.
